Mercury VirtualTerminal™

Free mobile payment processing iPhone app

Available from the iTunes store!

Supplement your product and service offering with Mercury Payment System's iPhone app for credit and gift card processing. When merchants combine Mercury VirtualTerminal™ iPhone app with an iDynamo* secure card reader, their iPhone becomes a hand-held encrypted payment processing device. It's the perfect solution for merchants who don't yet need a POS, ECR or terminal or want the flexibility to process from any location.

Features:
- FREE, user-friendly credit and gift card processing application
- Protects card data per PCI DSS requirements
- Automatic end-of-day batch settlement
- Admin functionality to configure email settings, agreement statement and greeting
- Email transaction receipts to the customer and yourself
- Also available on the iPad, or iPod touch
- Available for download from the iTunes store

*The iDynamo secure card reader must be purchased through Mercury Payment Systems due to Mercury's unique end-to-end encryption key. The cost of the iDynamo device is $99 plus shipping and tax, or can be rented for $12 per month.

Please note that use of Mercury VirtualTerminal does not remove the user from the scope of PCI security standards or the requirement and responsibility to comply with the PCI Data Security Standard. For more information, visit the PCI Security Standards Council web site at https://www.pcisecuritystandards.org.
